

180SB Series

PORTABLE SWINGBLADE SAWMILL

WORLD'S MOST VERSATILE SAWMILL

A COMPLETE WOOD PROCESSING SOLUTION

Featuring a proprietary 180° SwingBlade, the 180SB Series Sawmills are capable of processing entire logs into rough-cut lumber and value added products- without moving or turning the log. Designed for safe operation, one-man portability, easy maintenance and repair, the Timber Technologies' 180SB SwingBlade sawmills provide greater capabilities with a lower cost of operation over traditional mills.

FEATURES

180SB SERIES SWINGBLADE

2-YEAR
LIMITED WARRANTY

180° Swing Capability

The 180° SwingBlade Sawmill processes logs from either side, and safely double-cuts wide planks, beams and cants.

Choose the optional Radial MultiCatch system to accurately set blade height and depth at any angle

Blade Technology

The unique Six-tooth Carbide Tipped Thin kerf blade makes smooth accurate cuts and is second to none in the industry.

Sharpening can be done in place in minutes using the diamond sharpener. Ideal for both soft and hard woods.

Unequaled Versatility

The 180SB edges as it cuts, and has a variety of easily changed, optional accessories including a slabbing bar, planer blade, orbital sander, router and drill attachment.

Easily produce dressed and edged, pre-drilled timber products, with chamfers and grooves.

Shipping Crate

Our mills are pre-assembled and shipped in one crate along with the rails and all attachments.

Set up is fast and easy once your package arrives.

OPTIONS

WORLD'S MOST VERSATILE SAWMILL

Bevel Siding Attachment

Provides a pre-set angle to the blade to produce tapered boards for siding.

Drill

Use the drill attachment to auger up to 2" diameter holes horizontally or vertically.

Insertable Tooth Blade

Quickly and easily change the saw teeth in the field with the Insertable Tooth Blade.

Log Dogs

Portable dogs are self-centering and clamp from each side to keep logs straight and secure.

Orbital Sander

Use the orbital sanding disk to sand large beams and slabs for a more finished look.

Planer Blade

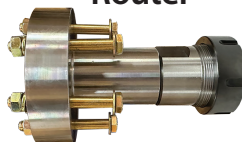

This attachment can plane, groove, and/or chamfer beams and large slabs.

Rails

Extend your cutting capabilities with the 7½ ft rail extensions to process any length log.

Router

Cut perfect mortise and tenon joints or custom profiles with the Router attachment.

Slabbing Bar

Create custom pieces using the Slabbing Bar attachment to cut slabs up to 6 ft wide.

180° SWING

PERFORMANCE DRIVEN DESIGN

The Timber Technologies' 180SB Series is manufactured with extruded aluminum for maximum portability and durability. Quick repair and replacement using off the shelf parts eliminates unnecessary downtime. The unique guard design protects the operator at all times and swings with the blade.

A double riving knife follows the blade to prevent entering the cut backwards when doublecutting.

The modular, lightweight, maintenance-free rail system features adjustable feet and 7½ ft. extensions. Various value-added attachments can be purchased for all models. The carriage comes fully assembled.

The 180SB is available in multiple sizes and models to fit your requirements.
